EXPERIENCE

ZFunds

April 2026 – Present

Software Development Engineer

Gurugram, India

(Python, TypeScript, JavaScript, NodeJS, FastAPI, Flask, Express AWS)

- Served as a core engineer driving the development and architecture of ZIVA Version 2, India's pioneer WealthTech AI platform.
- Architected and integrated a comprehensive, end-to-end Portfolio Analysis module across backend, frontend, and AI sub-systems.
- Implemented critical financial modules within ZIVA, including Goal Proposal, Portfolio Proposal, and Fund Recommendation engines.
- Designed and deployed dynamic language-switching and context-switching capabilities to enhance conversational continuity and user experience.
- Developed and integrated robust prompt guardrails to secure AI responses, minimize hallucinations, and mitigate prompt injection risks.

CyberPoint Private Limited

Jan 2025 – April 2026

Software Developer (Founding Engineer - [Advor.ai](#))

Gurugram, India

(Python, TypeScript, JavaScript, FastAPI, Nest.js, Express NodeJs, React.js)

- Scaled the backend to handle peak traffic surges by implementing Redis clustering and multi-layer caching; utilized prefetch pipelines to maintain high availability during high-concurrency events.
- Migrated the Profile Ranking service to an event-driven architecture using RabbitMQ; combined with a schema redesign, this slashed P99 response times from 700ms to less than 150ms.
- Engineered a hybrid RAG pipeline with a deterministic keyword-trigger layer to pull 100% accurate data from the DB before falling back to LLM semantic search.
- Built an automated technical screening engine and an asynchronous bio-generator using LangChain and Redis task queues to process slow LLM API calls without blocking the main request thread.
- Built RAG-based AI search engine using Llama, FAISS, and Elasticsearch, improving document retrieval accuracy by 40%.
- Architected and deployed core platform microservices (Profile Ranking, Rating, Feeds) from scratch, ensuring modularity and scalability.
- Implemented zero-downtime deployments on AWS (EC2, S3) using Coolify and established system observability with Grafana, Prometheus, and Sentry for real-time monitoring and incident tracking.

Defence Research and Development Organisation(DRDO)

June 2024 – July 2024

DevOps and Networking Intern

Hyderabad, India

(Python, Flask, Docker, Kubernetes, Cyber Security)

- Developed real-time LAN monitoring tool using Flask with responsive frontend for bandwidth tracking, device discovery, and network activity analysis.
- Integrated packet sniffing capabilities for traffic inspection.
- Containerized services with Docker and deployed via Kubernetes, integrating secure CI/CD pipelines and IP-restricted admin dashboards for internal network observability.

Java Fullstack Intern

Remote

(Java, Springboot, React.js, JUnit, Kafka, SonarQube)

- Built and documented RESTful endpoints using Spring Boot for the platform's core content module; implemented custom DTOs and Input Validation logic.
- Integrated SonarQube into the CI pipeline to automate the detection of security vulnerabilities.
- Built a React administrative dashboard for the editorial team to handle bulk CRUD operations, eliminating the need for manual SQL updates in production.
- Assisted in configuring Kafka consumer groups to handle background data synchronization, ensuring the frontend stayed responsive during heavy write operations.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java**Frontend:** Next.js, React.js Redux Toolkit, Tailwind CSS**Backend:** FastAPI, Node.js, Express.js, WebSocket, RESTful APIs, Microservices**AI/LLM:** LangChain, LlamaIndex, ChromaDB, Embeddings, Retrieval-Augmented Generation (RAG) Pipelines, Hugging Face Transformers, Prompt Engineering**Machine Learning/Deep Learning:** PyTorch, TensorFlow, Scikit-Learn, OpenCV, CNNs, NLP**Databases:** MongoDB, MySQL, Redis (Clustering/Caching), PostgreSQL**DevOps & Cloud:** AWS (EC2, S3, Lambda, RDS, DynamoDB, CloudWatch), Docker, Kubernetes, CI/CD**Messaging & Observability:** Kafka, RabbitMQ, Sentry, Grafana, Prometheus**ACHIEVEMENTS**

- **1st Runner-Up, Osmos Hackathon by OnlineSales.ai** – Secured 1st Runner-Up among 131 teams by building AdCraft, an AI-powered advertisement generation platform. Led team of 4 through 3 elimination rounds emphasizing user-centric design and AI collaboration. (Prize: INR 30,000)[Demo Video](#)
- **Finalist, CryptoGuard Hackathon at VIT Chennai** – Developed identity verification tool using Face Detection and Web3 decentralized architecture for secure credential storage, collaborating with team of 3 to implement blockchain based digital asset protection.

PROJECTS

Nexus PM - Project Management Backend Service | *Node.js, Express.js, MongoDB, JWT* [GitHub](#)

- Developed RESTful API with 30+ endpoints supporting collaborative project management. Architected three-tier RBAC system (Admin, Project Admin, Member), hierarchical task management with subtasks, and file attachment functionality. Implemented JWT authentication with email verification and password reset flows.

Write Medium - Full-Stack Blogging Platform | *React.js, Express.js, Tailwind CSS* [GitHub](#)

- Built full-stack blogging platform with JWT authentication, optimized MongoDB queries, and advanced search. Implemented responsive design with Tailwind CSS and deployed with RESTful API architecture

EDUCATION

B.Tech in Computer Science Engineering (AI & ML Specialization)

2021 - 2025

Vellore Institute of Technology, Chennai

CGPA: 7.23/10.0**Intermediate (Class XII)- ISC Board**

2021

Lucknow Public College, Lucknow

83.25%
